

Using the electro-mop

1. The electro-mop is *NOT* a vacuum, despite its looks. **The floor must be thoroughly swept** before use, otherwise it gets gunky inside
2. Fill the clean water reservoir with 1:32 MultiFloorPlus (**green** bottle) in water
3. Set the mop to “wash” and mop the floors! Use the **green eject squeezy** to put clean water down.
4. Use the dry setting to pick up puddles.
5. Clean the dirty reservoir thoroughly, rinse out the yellow sponge, and clean the mop bristles.
